SELF-TINTING GLASS

Manko Window Systems is proud to partner with Pleotint to provide Self-tinting Suntuitive® Glass. In a traditional window, the glass performance and tint are fixed—but the environmental conditions are always variable. With Suntuitive® Glass, when the environmental conditions change, so does the performance and tint of your glass. What is Suntuitive® Glass? It's simple—Suntuitive® Glass is made of laminated glass that, on days of intense sun, uses heat from sunlight to gradually tint your windows when necessary. Suntuitive® Glass naturally and passively adapts throughout the day, constantly balancing the heat and glare coming into your building. For additional information, please contact your Manko representative.

Features:

- ⇒ Reduces the need for shades, blinds, exterior overhangs, and other light blocking devices
- ⇒ Building occupants enjoy more consistent, comfortable temperatures, reduced interior glare, more natural lighting, and clear views of the outdoors every day of the year
- ⇒ Enhances building security and reduces outside noise
- ⇒ Provides annual energy savings between 20-43%

Facts:

- ⇒ Installs the same as a traditional IGU
- ⇒ Passed forced entry test: UL972
- ⇒ Passed impact test: CPSC 16 CFR
- ⇒ Acoustic test: ASTM E90-09
- ⇒ 10 year warranty
- ⇒ Maximum size is 64" x 144"
